ABOUT SUCCULENTS

Succulent plants are well-suited to arid environments with full sun exposure. Coming in countless shapes, colors, sizes, patterns, and growth habits, succulents are truly a type of plant you can never become bored with. While all cacti are succulents, it's important to note that not all succulents are cacti, though they do require similar care.

WATER

Allow soil to dry out between waterings.

LIGHT

Direct sunlight

SOIL

Cactus/succulent
potting mix

PET SAFE?

Mildly toxic

FERTILIZATION

Requires minimal fertilizing. Use a balanced cacti/succulent specific fertilizer (1-1-1) and fertilize 1-2 times during the growing season.

HUMIDITY

Low
(10-40%)

IMPORTANT NOTES:

The most common reason for why succulents die is overwatering. These plants are highly adapted to arid environments and store water in their leaves. Overwatering will cause them to rot and die. When in doubt, less is more!
